

ABSTRACT OF THE DISCLOSURE

It is an object to decrease the influence of a noise generated from an operating device without providing a shielding plate in an audio and video combined apparatus in which a DVD unit and a video cassette unit are provided in the same housing. A double-sided board (13) mounting a DVD operating device (5) and a video operating device (10) is provided between a video cassette deck (8) and a bottom plate panel (1a) of a housing (1). The DVD operating device (5) is positioned below the video cassette deck (8). The DVD operating device (5) is surrounded by a metallic chassis of the video cassette deck (8) and the metallic bottom plate panel (1a) of the housing (1) and is thus shielded electromagnetically. A noise generated from the DVD operating device (5) is shielded so that the video cassette deck (8) is not influenced.
